

Appendix A: Interview transcript and sketches made during the first interview

Me: Hello! I came to ask if you or the school needs any program to be written for them. Do you know of any specific issues present in the school?

Mrs xx: Good afternoon! Actually, the school is currently having an issue with the electronic register system because our provider has just raised the price of the service and the school is looking for an alternative. For the money saved the school could partially fund a new gym. Do you think you can solve our problem?

Me: Yes. I could develop an app that would be a less advanced version of the e-register used by your school. Does that satisfy you?

Mrs xx: I think so. Just remember about the functionality. I would like the app to have a way to add groups and students, edit student attendance, and add tests and mark them. Do you think you'll be able to create an app with such functionality?

Me: Absolutely. I have covered creating Graphical User Interface at school. I can easily create your app in Java.

Mrs xx: That's perfect. Actually, I also know Java very well so I will be able to extend your app. When it comes to the interface, I want it to be intuitive. I will show you some of my suggestions by sketching them. (The sketches are enclosed in figure 1 below).

Me: Okay, thank you for the suggestions.

Mrs xx: Try to finish the app soon and if I like it, I will use it in my class. If it does well in there too, I will extend the app to make it web-based and I will add the ability to send messages and post announcements.

Me: Okay. I will try my best. I think that's all for today. Thank you for the interview. Goodbye!

Mrs xx: Goodbye!
